HGH has been hailed as the ultimate in anti-aging, shown in studies to increase energy, strength, stamina, reduce fat, build lean muscle, improve memory, sleep and sexual function, heighten mood, re-hydrate skin, improve digestion, re-color hair, lower cholesterol and blood pressure, and much, much more.

Ornithine is a natural promoter of GH in the body. Protease metabolizes protein, including growth hormone. Albumin delivers nutrients to the cells and is essential for their growth and renewal. RNA is the communication system inside the cells. Zinc is essential for the growth and repair of the cells. MSM repairs the connective tissues and joints. Silica is important for the skin, hair and nails, as well as the assimilation of our electrical energies, and Colostrum is a tremendous aid to the immune system.
